

Amazon Quick for ALDI Süd

AI-powered productivity for your teams

Carsten Koch

Global Account Manager ALDI

Amazon Web Services EMEA

AI is fundamentally reshaping how teams deliver impact

33%

increase in productivity for companies that have adopted AI agents

15%

of day-to-day work decisions will be made autonomously through agentic AI by 2028

40%

boost in performance and speed for workers who use AI compared to workers who don't

Sources: Harvard Business Review

ALDI DX wants AI at work. Your enterprise needs it done right.

What employees want

- Powerful AI experiences brought into their work
- Tools that understand their contexts, not just their prompts
- Help with the busywork, so they can focus on what matters most

What enterprises need

- A unified, secure AI platform they can trust
- Data that stays within their control
- Governance, compliance, and access controls built-in from day one

ALDI is already using AI, but pain points persist.

Your AI tools see a sliver of your data, work in silos, and can't act across systems.

- Data fragmented across ServiceNow, Jira, SAP, and M365
- Routine tasks still consume time meant for strategic work
- App switching still burns 40+ hours a month
- Decisions stall waiting on analysis from disconnected sources

40+
hours a
month wasted

Introducing Amazon Quick

An AI assistant that turns questions into answers, answers into actions, and actions into outcomes

Deeply personalized.

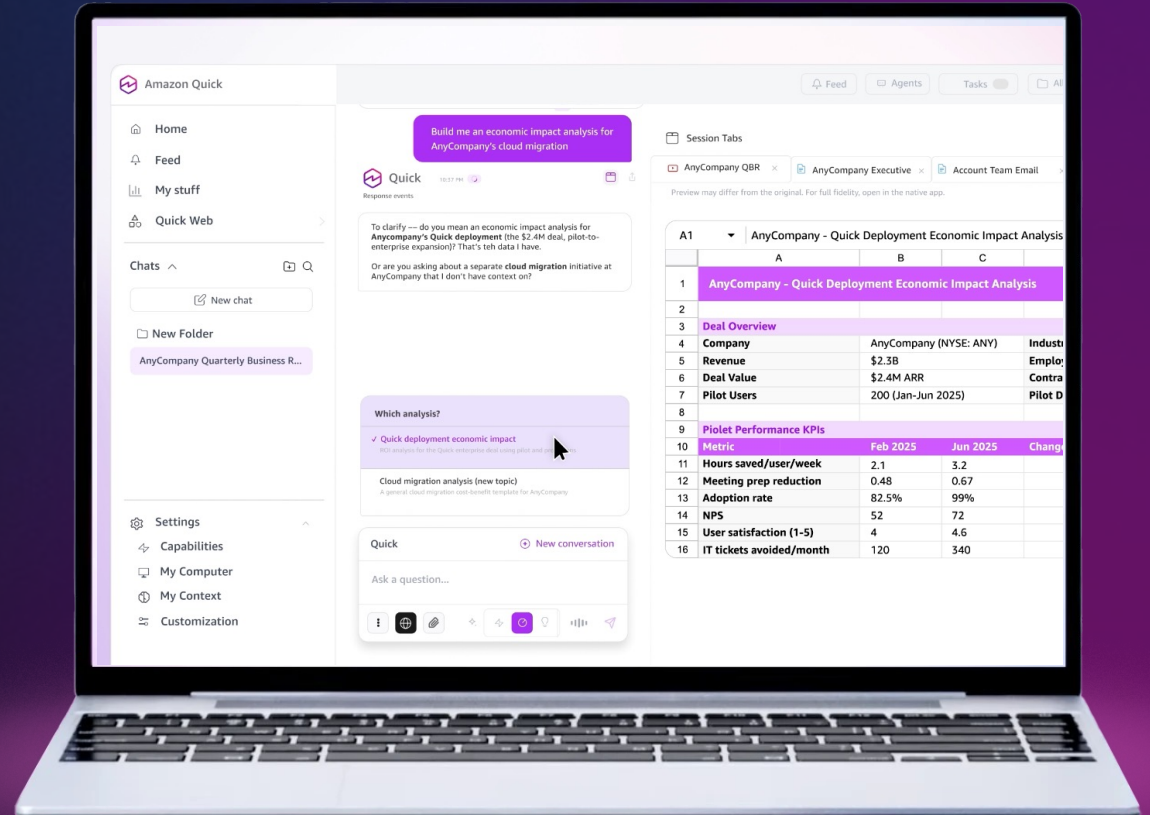

Connects to Jira, ServiceNow, M365, and SAP — shaped by ALDI's context.

Changes how you work.

Quick doesn't just answer — it acts: automating reports, triaging tickets, drafting comms.

AI you can trust.

Built on AWS. Runs locally. Data never leaves ALDI's control.

Everything you need in one place

ALDI's work is scattered across Jira, ServiceNow, SAP, M365, and more. Quick brings it all together.

Shared knowledge foundation

Bring your team's files, data, and context into collaborative knowledge spaces.

Build custom AI agents

Create agents tailored to your team's specific domain and data.

Conduct deep research

Generate multi-source, synthesized analysis grounded in your business data.

Visualize your data

Go from question to interactive dashboard without a separate business intelligence (BI) tool.

Simple automations

Connect your tools, define tasks, set a trigger, and let Quick handle the rest.

Full orchestration

Multi-step workflows that span systems, apply logic, and run autonomously.

Build custom apps

Create interactive tools for your team without writing code.

Create deliverables

Generate documents, presentations, spreadsheets, and visuals, and refine them until they're exactly right.

A day with Quick at ALDI DX

Morning

Quick has been watching your messages and email overnight.

When you open your laptop, Quick has a plan for your day, with flagged priorities, pre-drafted follow-ups, and a briefing on your first meeting.

Midday

You ask Quick to create an operations dashboard.

It creates it in a conversation using ServiceNow and Jira data. You share it with your team.

A day with Quick at ALDI DX

Midday

You ask Quick to build an IT operations dashboard.

It creates it in a conversation using your ServiceNow and Jira data. You share it in a Space for your team.

Afternoon

You need a cross-co update for tomorrow

Quick generates it, iterates on it with you, and then pushes the final version to Teams.

A day with Quick at ALDI DX

Afternoon

You need a cross-country status update for tomorrow.

Quick generates it, iterates on it in conversation with you, and then pushes the final version directly to Teams.

End of Day

Your scheduled agent has been monitoring your status.

Your agents inspect your status updates. You review what they find.

A day with Quick at ALDI DX

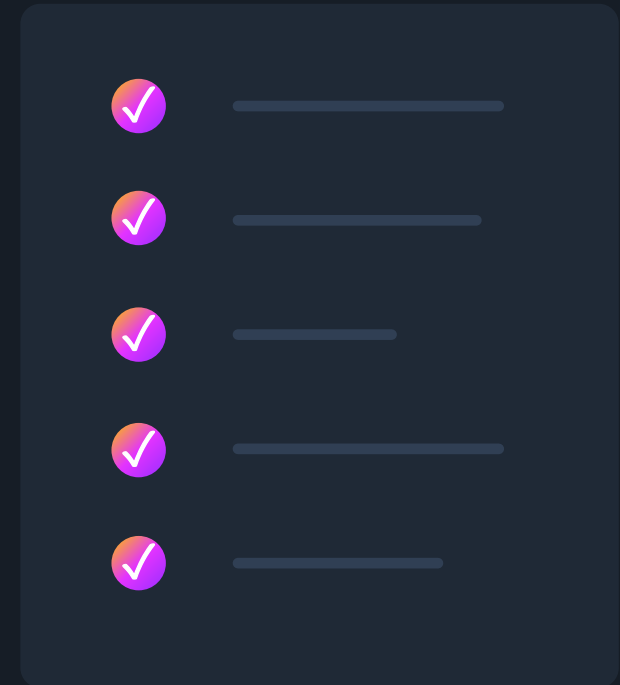

End of Day

Your scheduled agents have
been monitoring activities.

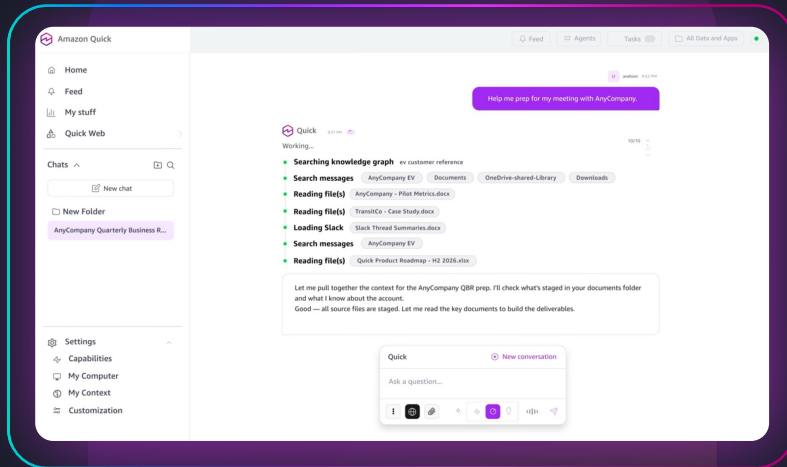

Your agents inspect your system health, flagging anomalies, and surfacing patterns. You review what happened on the activity feed.

Quick continues to work
when you can't. 24/7.

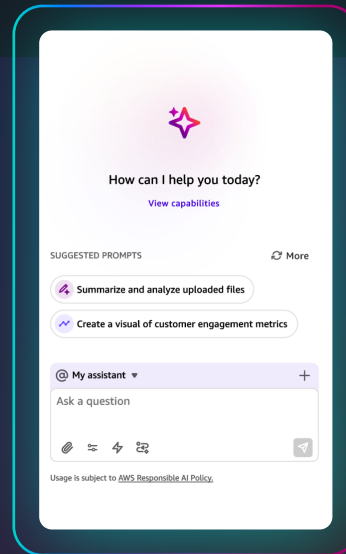

Quick works where you work

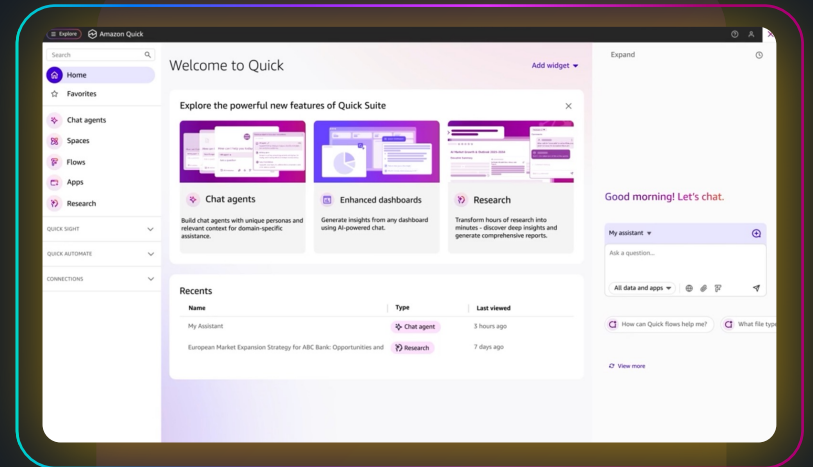

One AI assistant across every device. Browser, desktop, and mobile.

Desktop

Mobile devices

Browser

Quick desktop app

Your always-on AI assistant

Runs locally on your machine

Your knowledge graph never leaves your laptop

System notifications

Operating system (OS)-level notifications and toasts

Shared intelligence with Quick Web

Spaces and connectors are accessible across desktop and web

40+ action connectors

Teams, Outlook, Salesforce, Jira, SAP, SharePoint, and more

Local MCP servers

Custom tool integrations running natively on your machine

Browser automation

Control Chrome with your existing profile, cookies, and extensions

Local file access

Read, write, search, and organize files across your allowed folders, with semantic search inside PDFs, DOCX, PPTX, and XLSX.

Document and visual creation

Locally generate Images, PowerPoint, Word, Excel, PDF, and HTML files.

Activity feed

One feed for Slack, Outlook, and agent notifications. Triage, act, and stay on top of your workload without switching apps.

Proactive Awareness

Quick runs in the background, monitors your calendar, email, and messages, and surfaces what needs your attention through native OS notifications before you go looking for it.

Memory and knowledge graph

Establish your preferences over time and map people, projects, and decisions across your docs, Slack, and email.

Scheduled Tasks

Scheduled agents run in the background: morning briefings, Slack monitors, email watchers, and custom automations, all defined in natural language.

Enterprise trust isn't bolted on; it's where Quick starts

Quick runs on the same AWS infrastructure that supports the most security-sensitive workloads on the planet.

Protect mission-critical data

Your data is never used to train
underlying models

Implement granular role-based access controls (RBAC)

Microsoft Active Directory
integration

Meet stringent regulatory compliance requirements

- HIPAA eligible
- FedRAMP authorized
- SOC 2 audited
- ISO 27001 certified

Quick plans

* Professional and Enterprise include a \$250 infrastructure fee per AWS account. Additional agentic activity beyond plan limits billed at \$0.000833/sec.

Sign up using an AWS account

Free

\$0/user/month

Free for everyone

ALLOWS YOU TO:

- ✓ **Chat about any topic or task**—your AI assistant for everyday work
- ✓ **Research anything in depth**—analysis and reports
- ✓ **Automate the repetitive stuff**—Flows that handle your daily busywork
- ✓ **Turn ideas into real apps**—production-ready web apps in minutes
- ✓ **Turn conversations into deliverables**—create docs, sheets, decks, and apps
- ✓ **Connect the tools you already use**—Slack, Microsoft 365, Google Workspace, QuickBooks, and more

Try for free in minutes

Plus

\$20/user/month (annually)
\$25/user/month billed monthly

For teams up to 300 who need collaboration and user management

EVERYTHING IN FREE, AND:

- ✓ **Quick on your desktop**—proactive AI across email, messaging and local files
- ✓ **Shared Spaces for your team**—knowledge, agents, and automations that compound across people
- ✓ **Quick works where you work**—browsers and Microsoft 365 extensions
- ✓ **Scale when you're ready**—user management, centralized billing, up to 300 users, 10 GB storage per seat

Professional

\$20/user/month

For organizations requiring advanced governance & controls at any scale

EVERYTHING IN PLUS, AND:

- ✓ **Grow without limits**—unlimited user scaling so your whole org can get on board
- ✓ **Enterprise governance and compliance**—RBAC, SSO, data sovereignty, and admin controls
- ✓ **See the big picture instantly**—dashboards and data visualizations that surface what matters
- ✓ **Automate workflows**—Build repeatable flows for everyday tasks
- ✓ **Support when you need it**—24/7 AWS Support
- ✓ **25 GB pooled storage per user**

Enterprise

\$40/user/month

For teams who author the insights and automations their enterprise runs on

EVERYTHING IN PRO, AND:

- ✓ **Author dashboards your way**—custom dashboard creation tailored to your business
- ✓ **Automate complex processes**—human-in-the-loop orchestration across UIs, APIs, and teams
- ✓ **Certify and publish assets**—so your team always works from one source of truth
- ✓ **50 GB pooled storage per user**

Amazon Quick vs. the competition

vs. Claude Cwork

One person's tool vs. your whole team's advantage

- Claude runs on one machine with one person's files
- Quick gives teams shared knowledge spaces, team agents, shared automations

vs. Microsoft Copilot

One vendor's ecosystem vs. all your tools

- Copilot requires M365 E3/E5 + \$30/user. Can't reach Jira, ServiceNow, or SAP.
- Quick works across ALL of ALDI's tools for \$20/user

vs. Gemini Enterprise

Google's tools only vs. your full stack

- Gemini helps with docs and email inside Google Workspace. No team Spaces, no automation, no BI, no apps
- Quick connects to 100+ tools, gives your team shared workspaces, custom agents, automation, built-in BI, and app creation

Amazon Quick for IT Operations

How Quick accelerates IT service delivery for ALDI DX

Autonomous Ticket Triage

Service desk agents manually classify and route tickets. Quick auto-triages based on content, priority, and history.

Impact: Reduce MTTR, scale without headcount

Cross-Country Knowledge Base

IT knowledge scattered across 11 countries in different languages. Quick centralizes and translates policies.

Impact: Faster resolution, self-service answers

Endpoint Health Monitoring

Store devices fail without warning. Scheduled agents detect patterns and trigger self-healing runbooks.

Impact: Reduced store downtime, proactive ops

Vendor Management Intelligence

Vendor contracts across 24 projects. Quick synthesizes status, deadlines, and risks.

Impact: Visibility across TCS, Wipro, Genpact

Automated Daily Briefings

Leadership spends hours compiling updates. Quick generates morning briefings from Jira, ServiceNow, and email.

Impact: 2-3 hours saved per leader daily

Incident Pattern Analysis

Repeat incidents go undetected across stores. Quick identifies recurring patterns across regions.

Impact: Root cause identification, prevention

Change Management Automation

Restructuring comms drafted manually for each region. Quick generates, translates, and distributes.

Impact: Consistent messaging across 11 countries

Amazon Quick for Productivity

How Quick helps ALDI teams do more with less

Meeting Prep & Debrief

Managers spend hours preparing for cross-country syncs. Quick auto-generates briefs from emails, Jira, and calendar.

Impact: 800+ hours saved annually

Multilingual Communications

HQ communicates across 11 countries in multiple languages. Quick drafts and translates in context.

Impact: Consistent, fast cross-border comms

Data-Driven Reporting

Weekly business reviews require manual data compilation. Quick integrates dashboards with automated generation.

Impact: Reports in minutes, not hours

Strategic Account Research

Teams research vendors and partners manually. Quick synthesizes web, internal docs, and CRM data.

Impact: 5x research throughput

Procurement Intelligence

Complex vendor evaluations across global operations. Quick analyzes contracts, compares offerings, drafts recommendations.

Impact: Faster vendor decisions

Onboarding Acceleration

New hires face scattered documentation. Custom agents centralize team protocols and institutional knowledge.

Impact: Response times from days to minutes

Amazon Quick for Operations

How Quick supports ALDI's 7,300+ stores

Store Operations Q&A
Regional managers need instant answers from policy docs and compliance guides. Quick provides AI-powered search.
Impact: Answers in seconds, not hours

Supply Chain Coordination
Teams face coordination inefficiencies across global operations. Custom agents connect supply chain data sources.
Impact: 15-20 hours weekly saved per team

Compliance Processing
Regulatory documents require hours of manual review. Quick extracts, categorizes, and validates content.
Impact: 80% reduction in processing time

Weekly Business Reviews
Operations teams manually compile data for leadership reviews. Quick automates data aggregation and generation.
Impact: 100 hours weekly saved

ServiceNow Ticket Intelligence
Global Service Desk handles 540+ agents across countries. Quick enhances ticket routing and resolution.
Impact: Faster MTTR, smarter routing

Project Portfolio Monitoring
24+ projects tracked manually across teams. Quick synthesizes status, deadlines, and blockers.
Impact: Real-time portfolio visibility

Cost Optimization Alerts
Spend anomalies go undetected. Scheduled agents monitor budgets and flag deviations proactively.
Impact: Faster cost control, 25% target support

Amazon Quick for Finance

How Amazon is using Quick for financial planning and analysis (1)

Financial Reporting & Commentary Automation

40 hours spent monthly on financial reviews with 10-20 day turnaround times, manually pulling and reconciling data across 300+ tables. With the Financial Reporting & Commentary tool, automated workflows compile data from various systems while AI generates commentary using service-specific prompts. Teams can edit AI insights and build custom tables, consolidating data sources and standardizing commentary. Resulted in 60-70% time reduction (3 hrs to 1 hr per deliverable) and decision cycles reduced from 1 week to minutes.

AI-Powered Financial Planning & Target Setting

1,800+ monthly hours spent on manual forecasting with inaccurate customer-level models, resulting in billions in unidentified revenue impact. The AI Powered Financial Planning & Target Setting tool allows integration of historical data, earnings, pipeline, sales hierarchy, customer profiles, and public sentiment to deliver granular customer-level forecasting with proactive recommendations. 1800+ hours of manual work reduced, addressing revenue impact, improving customer and detailed-level forecast accuracy.

Advanced Analytics & Research Automation

2 days spent monthly on manual Excel financial analyses for leadership review. Market research is time-consuming and often skipped, while subjective documentation lacks consistency. Advanced Analytics & Research tool leverages AI assistance to use scenarios to model sensitivities and leverage statistical capabilities for correlation studies. Analysis time drops from 2 days to 1 hour monthly per team with enhanced forecasting accuracy and multiple scenario exploration capabilities. Research throughput increases 5x.

Amazon Quick for Finance

How Amazon is using Quick for tax and accounting

B2B Feasibility Agent

Business Development partners lack transparency about past B2B implementations scattered across various sources. Transfer Pricing Benchmarking Automation leverages chat agents to analyze past B2B tax implementations, providing technical solutions, requirements, guardrails, and best practices. Enables faster deal evaluation, reduces duplication, improves transparency, supports potential external scaling, and fosters collaborative partnerships.

Transfer Pricing Benchmarking Automation

Over 100 biennial benchmark studies support multibillion dollar transactions across hundreds of entities, requiring 10,000+ hours with 90% spent on qualitative screening. Transfer Pricing Benchmarking tool uses AI to automate qualitative screening by understanding company activities and matching to search criteria. Resulted in 90% reduction in time spent on qualitative screening

Digital Services Tax (DST) Knowledge Space

DST legislation across countries is scattered across tax authority web pages in different languages, making manual searching time-consuming. The DST Knowledge Space leverages a web crawler to auto-index DST guidance from UK, France, and Italy tax sites into separate knowledge bases per country with daily refresh. Country-specific chat agents answer questions in English with source citations. Resulted in faster access to DST legislation, easy translation of legislation into English, reducing manual search time and fact-checking

Month End Close Assistant

35,000 annual hours spent on manual month-end close tasks, requiring 15 minutes per variance analysis and high-risk manual reconciliations. With Month End Close Assistant, natural Language queries with instant answers and real-time anomaly detection. Automated sub-ledger to GL reconciliation with one-click drilldown. Saved 14,000 hours (40% reduction), 93% time savings by reducing analysis time to 1 minute, and front-loaded 95% Of tasks to the pre-close period.

Smart Payment Processing Support

Each payment decision requires time spent on manual review and approval that is prone to error. Smart Payment Processing, using a Quick Suite Flow-built assistant, streamlines payment processing for hundreds of approvals using rules-based conditions. Resulted in reduction of time spent from half an hour to minutes per approval.

AI-Powered Regulatory Compliance Processing

Over 200 annual regulatory documents requiring 160 hours each for manual extraction and categorization. With Intelligent Regulatory Compliance Processing, a 7-step AI workflow enables drag-and-drop document upload up to 200 pages, analyzes structure, ,extracts compliance statements, categorizes content with 90% accuracy, and validates results. Processing time reduced by 80% (160 to 32 hours per document), with capacity gains across 200+ documents and 24-hour turnaround with 90% accuracy.
